Education

University of Wisconsin–Madison

Expected May 2027

BS in Computer Science & Data Science GPA: 3.5

Experience

Software Engineering Intern

Remote

ReAlign Insurance Holdings (Python, TypeScript, Snowflake, Azure)

Jan 2026 – Present

- Built an automated system that flags which of ReAlign’s **50,000 insured locations** sit near an active wildfire, replacing a manual news-monitoring process. A timer-triggered **Azure Function** ingests live federal fire data, reprojects for accurate 15-mile buffers, and spatially joins Census ZIP polygons in GeoPandas to surface at-risk locations for underwriters.
- Shipped features into a **SOX compliance platform** that tracks every employee’s system access and enforces a periodic manager review: added **self-service access requests** and **automated review-cycle kickoff**, **turning a manual audit into a scheduled process**. (Next.js, TypeScript, Snowflake, Microsoft Entra)
- Built its notification layer so mass manager emails **queue for admin approval before sending**, with single-use tokens preventing **duplicate sends under concurrent approval**. Added **orphan-account cleanup** and one **audit view** where IT can verify every access decision.
- Built an **internal AI assistant** that answers plain-English questions across the company’s insurance documents with **cited answers** linking each figure to its source PDF (**Snowflake Cortex**, FastAPI, React/TypeScript, containerized on Snowpark). Designed **async job handling** so slow model responses **survive a strict request timeout**, plus **prompt-injection guards** on untrusted input.

Software Engineering Intern – Paranoid AI

Remote

Yahoo (Databricks, PySpark, AWS)

June 2025 – Aug 2025

- Built an end-to-end platform tracing issues across the **code–container–cloud lifecycle** of an application, **cutting the manual correlation work** security engineers did to track vulnerabilities through deployment.
- Reduced a core PySpark job from **90 minutes to 5** over a **multi-billion-row** dataset: profiled in Databricks to isolate **shuffle-bound IO**, **pruned columns and deduplicated ahead of joins**, and introduced a **curated canonical repository dimension** so sources joined on one key instead of repeated wide joins; validated against held-out samples to confirm coverage held.
- Developed a unified dashboard aggregating metrics, logs, and model-driven insights into one view, reducing root-cause identification **from hours to minutes**.

Projects

- **Retro Arcade Cabinet** — **Led the KHK Engineering Expo team** building a full arcade system: an original 2D game in **Godot/GDScript**, physical I/O buttons mapped to in-game actions, and an **automated deployment pipeline** on an **NVIDIA Jetson**. **Second place**, UW–Madison Engineering Expo.
- **Road Rally Bot** — **discord.py** scavenger-hunt bot backed by **SQLite**: team rosters, per-team task completion, and each member’s submissions syncing into **shared team progress**. Judges grade photo proofs **in real time** beside a **live leaderboard**. **Cut scoring from an hour of manual tallying to roughly 10 minutes**; self-hosted on a **Raspberry Pi** and run inside Discord so participants installed nothing new.

Leadership

Kappa Eta Kappa – Professional Computer Science Fraternity

Madison, WI

Engineering Expo Chair; Assistant Treasurer; Brotherhood Engagement Chair

Sept 2023 – Present

Lead the Expo project team, manage chapter finances including dues and rent collection, and organize technical workshops and networking sessions.

Skills

Languages: Python, Java, C, C++, TypeScript, SQL, Bash

Backend & Infrastructure: FastAPI, Node/Next.js, Docker, Azure Functions, Snowflake, Databricks, PySpark, AWS, Linux, Git, CI/CD

Data & Application: pandas, GeoPandas, React, REST APIs, SQLite **Certification:** Oracle Certified Associate, Java SE 8
